

WEEK ONE HYBRID SECURITY SOC INTERNSHIP ASSIGNMENT

Adeleke Theophilus O

1. Deconstruct the Alert:

What are the 5-7 most important pieces of information in this alert?

- **The alert: MEDIUM PRIORITY ALERT**
- **Timestamp: 2025-11-05 09:32:15 UTC**
- **Destination IP: 198.51.100.5**
- **Destination Port: 4898**
- **Process: powershell.exe**
- **Alert Type: Suspicious Process Activity**

2. Initial Hypothesis (Your "Gut Feeling"):

Is this alert likely a False Positive (harmless) or a True Positive (malicious)?

A true Positive

In 1-2 sentences, why do you think that? What one piece of evidence from the alert is the most suspicious to you?

From the alert dashboard, the alert indicates 'medium', which means the issue is of high priority, but it remains a matter of concern. With this, we can conclude that it is a true positive. And also, PowerShell process running with -nop -enc parameters, which are typically used by attackers.

3. Investigative Questions:

What are the first 3 questions you would need to ask to Confirm your hypothesis?

- **The content of the PowerShell command running**
- **Has the destination IP been flagged malicious before?**
- **Who executes the process?**

4. Initial Triage & Priority:

oThe alert is marked "Medium." Do you agree? Would you raise or lower the priority? Why?

Yes, I will raise the priority high. Because it's also a thing of concern, as far as it's flagged malicious.

5. Recommended Next Step:

What is the single next action you would take?

Isolate and block the outbound traffic to the IP address, and do further investigation
